Equipment for Field Maintenance and Barrier Network

Liquid concentrate for marking grass pitches. 3-litre pack

Art. 6492

White water-based paint for grass sports fields.

Concentrated, odourless, non-toxic, breathable, eco-friendly water-based paint designed for marking lines or delimiting areas on grass pitches and playing fields.

White water-based paint with high coverage, very high whiteness, high breathability and easy application.

Marking is recommended on well-mowed pitches, even if wet or damp, even in foggy conditions and at temperatures below 0°C (in these cases, drying is slower): the product is not affected by humidity and, once dry (approximately 20 minutes in normal conditions), is not affected by rain. If the surface to be marked is clay or sand, it is advisable to wet it before marking.

Use drinking water as a diluent in a ratio of 1:3 to 1:6, recommended 1:5, i.e. 3 litres of concentrate and 15 litres of water.

Consumption for a regulation football pitch: 3 litres (and 15 litres of diluent)

Consumption for a regulation rugby pitch: 5 litres (and 25 litres of diluent)

Visit our “Field Maintenance Equipment” section to discover our line marking machines.

Visit our ‘Balls, Training Equipments and Other Accesories for Football and Futsal’ section for more information.
