Monotubular and Lattice Basketball or Minibasketball System

Transportable monotubular steel basketball system, freespace 165cm, model College

Monotubular steel basketball system, transportable.

One system consists of two complete structures.

Each structure has a backboard support made of 15x15cm square tubing and reinforced by two Ø40mm round tubing tie rods mounted on a 130x165cm rectangular base made of 40x80mm rectangular tubing; the backboard is fixed to a reinforcement frame attached to the structure by means of a system that allows it to be adjusted in height and angle, adapting it to uneven floors.

The structures are transportable thanks to a nylon wheel movement system (suitable for occasional movement).

At the rear of the structure there is a metal box with a lid to ballast the structure and prevent it from tipping over: we recommend filling each box with 260 kg of sand in bags or 280 kg of loose sand during handling.

180x105 cm backboards screen-printed in black and white, regulation basket rings and nets included.

In use, the bases, which are specially designed for this purpose, must be fixed to the ground with anchors specific to the type of flooring (not included).

All components are supplied unassembled for ease of transport.

Indoor version, item 4248: painted structure, wooden backboard (item 4050), regulation basket rings (item 4016) and nets (item 4020).
