Monotubular and Lattice Basketball or Minibasketball System

Fixed lattice basketball system, hot-dip galvanised steel, extension 215cm.

Fixed lattice basketball system, extension 215cm.
One system consists of two complete structures.

Each structure consists of two thick Ø40mm diameter tubular steel trusses, joined together by internal reinforcements and bracing to prevent vibration and ensure solidity and stability.
The 180x105cm backboard with black and white screen printing is supported by a special 50x30mm reinforcement frame that reduces the risk of breakage and supports the basket ring (included and supplied with net).

All metal parts are hot-dip galvanised to ensure better protection against corrosion.
All fasteners used to join the parts are grade 8.8.

In use, the bases, which are specially designed for this purpose, must be fixed to the ground with anchors specific to the type of flooring (not included).

All components are supplied unassembled for ease of transport.

Available in two versions: item 4251 with wooden backboard (item 4050) or item 4256 with melamine resin backboard (item 4051).
Available: pair of front guards (item 4402).

Visit our "Basketball and Mini-basketball Systems" section for more information.
Visit our "Accessories for Basketball and Mini-basketball Systems " section for more information about backboards, basket rings, nets, protections and more.

Caratteristiche:

SPACE REQUIREMENTS OF THE BASE: 150x130cm
