Wall-mounted Basket and Minibasket System

Wall-mounted basketball/mini-basketball system, customised extension and adjustable, foldable sideways, with rigid tubular tie rods.

Art. 4271

Wall-mounted basketball/mini-basketball system, customised extension and adjustable, foldable sideways.

One system consists of two complete structures.

The horizontal reticular structure is made of 50x50mm tubular with 50x30mm tubular reinforcements, equipped with a lower diagonal with manually operated male-female interlocking with a special rod for locking in position.

The wall frame, made of tubular steel hinged with pins and bushes, is reversible for rotation possible from both sides; the frame is fixed to the walls by means of expansion plugs or any studs with external counter plates (not included in delivery).

Movement-accompanying tie rods and anti-collapse safety rigid tubular tie rods (the wall frame provides for tie rod and structure attachments and is therefore large in size).

System for adjusting the height and depth of the backboard even when the structure is already installed.

Class 10.9 assembly bolts, epoxy powder coating.

The following variants are possible when bidding:

- freespace definition
- type of backboard (wood, resin, crystal, plexiglass)
- basket ring selection
- application of the height adjustment device for basketball/minibasketball

To determine the extension size, simply indicate the distance between the anchoring wall and the playground baseline; the stratigraphy of the wall is also required to verify installation.
