Protection Pads And Accessories | Seating for Tribunes

Seat with backrest 440x450x350mm, in coloured polypropylene, with anti-UV treatment.

Art. 8509

High back polypropylene seat, dimensionally complying with the recommendations of FIFA/UEFA.

The generous seat depth allows the user to enjoy the sporting event in total comfort, without sacrificing strength and durability thanks to the 3

fixing points and the several ribs under the seat.

Injection moulded with top quality coloured copolymer polypropylene, fire resistant class 1 (Italian standard), also addicted with Anti-UV treatment (standard or long range) to ensure maximum resistance to UV insulation rate.

The seat surface is smooth and shiny to prevent dirt accumulation and facilitate cleaning.

The drainage of the liquids occurs by gravity by means of an integrated hole in the seat design that drives the liquids in the rear avoiding any kind of stagnation in the central part of the shell.

The fixing plugs are closed and protected by non-removable snap-on caps in the same colour as the seat.

Dimensions

Width: 440 mm.

Depth: 450 mm.

Height: 350 mm.
